## Evening Brief

Date: Wednesday August 22, 2018

---

### Weather Summary

#### \*\*\* **Gusty winds across northeast Nevada and Idaho Friday**\*\*\*

Wednesdays lightning was mainly wet, and in some cases, very wet, when factoring in the last 48 hours. These thunderstorms are exiting the region finally by Thursday morning.

Drier air will spread across the entire area Thursday, but winds will be fairly light.

Winds will increase across the northern part of the area on Friday ahead of an approaching trough of low pressure. Winds will continue to be elevated into the weekend into next week, with temperatures gradually cooling 5-10 degrees across the northern half of the Great Basin. The strongest winds look to be Sunday/Monday across NV/UT and **High Risk** may be issued for parts of these areas

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	5	Light IA Attack Activity
National	5	GB New Fires and Acres: 22 fires 5,316.3 acres; 5,159 acres large fire growth

---

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

**Fuels and Fire Behavior advisory has been issued for [Northern Great Basin](#)**

### Fuels/Fire Potential

A Fuel/Fire Behavior advisory has been issued for North/West Nevada into Idaho and Northern Utah. This advisory can be found here: <https://gacc.nifc.gov/gbcc/fuels.php>

Widespread areas of critically dry fuels continue across the northern half of the Geographic Area, although ERCs have decreased some with the showers and thunderstorms that moved across the area yesterday. However, ERC's are still in the 80th to 95th percentile across ID/WY/Nrn NV into Nrn UT, with pockets above the 97th percentile.

Sagebrush Live Fuel Moisture levels across the northern half of the Great Basin are near or below mid-August normals, and grasses are cured in all areas. ERC's are below the 50th percentile across most of the southern third of Nevada, southern Utah, into the AZ Strip, with only a few remaining stations in the 70th-80th percentile in southern/southeast Utah, which is near record levels for this time of year in those southern areas. However, increasing moisture by midweek across southern/eastern Nevada into Utah and the AZ Strip should knock fuels down considerably.

## Resources:

### Aviation within the Great Basin

- 2 VLAT's, 7 LATs, 0 CL-415
- 21 SEATs, 2 Fire Bosses
- 9 Type 1 Helicopters / 9 Committed
- 8 Type 2 Helicopters / 6 Committed
- 20 Type 3 Helicopters

### Crews Committed within the Great Basin

- 12 IHCs Committed / 0 Available
- 25 T-2 IAs Committed / 0 Available
